SUMMARY

Information Science Engineering student with a CGPA of 9.16/10, passionate about software development, backend development, and AI-driven solutions. Skilled in Java (DSA & OOP), Python, SQL, Django, TypeScript, and Docker, with hands-on experience building intelligent systems, developer tools, and full-stack applications. Strong foundation in Operating Systems, DBMS, and Computer Networks. A quick learner with a passion for exploring emerging technologies, solving real-world problems, and continuously enhancing technical expertise.

EDUCATION

Bachelor in Engineering – Information Science and Engineering

Maharaja Institute of Technology Mysore - 2023-2027

CGPA – 9.16/10

TECHNICAL SKILLS

Programming: Java(DSA & OOP), Python(Projects Development), C, SQL

Web: HTML, CSS, JavaScript, TypeScript

Frameworks: Flask, Django

Databases: MySQL, PostgreSQL, Supabase

Tools: Git, GitHub, Docker, VS Code, Jenkins

Core: DSA, Object Oriented Programming (OOP), Operating System (OS), DBMS, CN

INTERNSHIP EXPERIENCE

Web Development Intern:

Future Interns | Aug 30, 2024 – Sep 30, 2024

- Built and deployed responsive web applications, including a basic e-commerce platform
- Developed frontend components using HTML, CSS, and JavaScript
- Implemented product listing, UI components, and core website functionality
- Gained hands-on experience in project structuring and development workflows

Received: [Completion Certificate](#) and [Letter of Recommendation](#)

PROJECTS

1) Automatic Timetable Generator Using Genetic Algorithm

- Developed an automated timetable generation system using Genetic Algorithms to create conflict-free schedules with multiple academic constraints.
- Built a Flask-based web application for timetable generation, visualization, and management.
- Implemented faculty, classroom, and subject constraint optimization for efficient schedule allocation.
- Designed to reduce manual scheduling effort and simplify academic timetable management for educational institutions.

Tech: Python, Flask, HTML, CSS, JavaScript

GitHub: [Automatic Timetable Generator](#)

2) DARTX – VS Code Extension

- Developed a VS Code extension to detect missing dependencies and project configuration issues in real time.
- Implemented intelligent dependency analysis with automated installation suggestions and command validation.
- Enhanced developer productivity through project health monitoring and environment diagnostics.
- Designed to simplify project setup and reduce dependency-related development issues.

Tech: TypeScript, Node.js, VS Code Extension API, HTML, CSS, JavaScript

GitHub: [Smart Dependency Manager](#)

3) AI-Based Smart Waste Segregation

- Developed an AI-powered application to classify waste into four categories using computer vision techniques.
- Implemented image processing and confidence-based prediction using OpenCV.
- Built an interactive Streamlit dashboard for real-time waste classification.
- Designed to promote efficient waste segregation and encourage environmentally sustainable practices.

Tech: Python, Streamlit, OpenCV, NumPy, Pandas

GitHub: [AI Waste Segregation System](#)

CERTIFICATIONS

Programming in Java – NPTEL | Score: 98% | Gold Medal | Top 1% Nationwide

Certificate Links: [NPTEL Certificate](#)

AI for Everyone – Coursera: [AI for Everyone](#)

Prompt Engineering for ChatGPT – Coursera: [Prompt Engineering for ChatGPT](#)

ACHIEVEMENTS

- Achieved Top 1% nationwide rank in NPTEL Programming in Java (98%, Gold Medal)
 - Secured 2nd Prize at college project expo for Automatic Timetable Generator using Genetic Algorithm
 - Received Best Project Award and Award of Excellence from Ethnotech Academy for AI waste segregation project
-
